131 101 /6 cont./ conclude that these Indians are by preference dwellers on the savannas and not forest dwellers.

114 361 I copy, because they are absolutely in conformity with my observations, Dr. Simpson's words: "An Indian requires three things for his home: (1) an open space, a savanna of greater or lesser area, for his dwelling; (2) a perpetual stream of water, sufficiently wide and deep so that he can swim and fish or, at least, which will provide a supply of water all year; (3) a forest on the edge of which he can grow crops and have wood available and, secondarily, where he can hunt."

131 12. The Gran Sabana is located "between the parallels 4° 34' and 6° 45' north longitude /sic/ and the meridians 60° 34' and 62° 50' west of Greenwich." The Gran Sabana is thus located in the most southeastern corner of Bolivar State and of Venezuela, in that part where Venezuela touches Brazil and British Guiana.

133 The Gran Sabana is shaped like an immense open fan, the ribs of which would be the several rivers that form the Caroní, which is the central rib or vein of this entire great river valley or hydrographic basin.

132 133 13. In general, the climate of the Gran Sabana, despite its proximity to the tropic is temperate; this is due to the altitude above sea level and the high mountains which surround it.

131 14. The area of the Gran Sabana is approximately 35,000 square kilometers.

133 15. The principal mountain ranges, which surround this almost virgin district and which give it an aspect of majesty and grandiosity beyond imagination, are: Roroima, Iru-tepui, Putari-t, Lema (Ilotoyeukurú, Tukui-ouki-yén, Morochipán), Aparamán, Auyán, Aprada, Apakará, Chimaté, Tirepón, Churí, Akopán, Uekpuimá, Katurán, and Uei-tepui. Of lesser importance are Apaurai, Prai-tepui, Arumá-tepui, Sororopán, Pavi-tepui, Uona-tepui, and others.

101 132 182 particular region is that some tribes habitually live in forests while others habitually live in sabanas, grassy plains amid the forests. This distinction may accompany or induce definite cultural differences even between tribes that are 131 closely allied racially and linguistically. The Kamarakotos, like the Taure- 133 panes, are sabana Indians.[1] They live in sabanas in the midst of surrounding forests, in a series of valley bottoms about 400 to 500 meters in elevation. They always live near but practically never in the forests and strongly prefer relatively flat valley bottoms, seldom penetrating into the mountains even temporarily. Until taken up by white explorers there is no memory or legend of any of them ever climbing Auyán-tepúi or any of the other real mountains 132 around their valleys. In these valleys frost is, of course, quite unknown and the days are always warm enough for clothes to be unnecessary for warmth but are seldom disagreeably hot. The nights are usually chilly and make sleeping indoors preferable. There is little seasonal variation of temperature, but there [22] are the usual well-defined rainy and dry seasons of the tropics. As in most of Venezuela, the rainy season is "winter," when there is little activity in travel, hunting, or agriculture, and the dry season is the active time.

121 178 [177] Recently subject, like all the Indians, to growing Venezuelan[2] influence, the Kamarakotos yet retain practically all the pre-Columbian culture of this area in readily recognizable and relatively unmodified form. This makes them an almost ideal group for study from this point of view and it also makes their study of much greater value than might appear from the small size of this one tribe. As a type study it is a concrete, unified, but broadly characteristic example of the sort of culture that once prevailed over most of Venezuela and that still prevails over an enormous area of that country. Such "civilized," "Venezuelan," or "European" influence as does appear in this tribe adds to, rather than subtracting from, its importance and interest. This influence lends itself to clear analysis and it also typifies a widespread process and one of the greatest social and economic importance.

114 Studies of this sort have been relatively so rare in Venezuela that an observer can be sure that almost anything he observes is important and worth publishing as long as it is accurately reported and intelligently interpreted. There has, it is true, been a long series of reports on Venezuelan Indians and certainly no depreciation of these studies is intended. Some of the early colonists and missionaries left very valuable accounts, irreplaceable because of their first-hand records of things now vanished. It goes without saying, however, that these were not unprejudiced or skilled observers and that their information was not gathered in a scientific way or integrated with anthropology in general, a science that hardly existed at that time. Other and ethnologically more accurate and sophisticated travelers, like Humboldt and Schomburgk, have since added many more and, on the whole, better data of the same sort. It is necessary to mention only the names of Cordero, Salas, Ernst, Tavera-
